

TECHNOLOGY AND ITS ROLE IN THE FUTURE OF THE MINING INDUSTRY

BHP Billiton invites you to join us for a lunch briefing on

TECHNOLOGY AND ITS ROLE IN THE FUTURE OF THE MINING INDUSTRY

BHP Billiton is the world's largest diversified resources company. We discover, develop and market a range of commodities including aluminium, energy coal and metallurgical, copper, manganese, iron ore, uranium nickel, silver, titanium minerals, oil, gas, liquefied natural gas and diamonds, to meet the world's resources and energy needs.

We are creating innovative systems and processes that enable us to locate new resources and unlock resources once deemed too complex or uneconomical to process. Technical innovation is a key element of BHP Billiton's commercial strategy to achieve growth and improved financial performance.

Dr Megan Clark, Vice President Technology, will be speaking about the role science and technologies play in providing competitive advantage and growth options for BHP Billiton's global businesses.

Tuesday 17 April 2007
12.30 pm – 1.30 pm

Grand Hyatt Melbourne

Room: Savoy 3

RSVP 12 April 2007
